Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases.

-I-FUNCTION: Receptor for Wnt proteins. Most of frizzled receptors are coupled to the beta-catenin canonical signaling pathway, which leads to the activation of dishevelled proteins, inhibition of GSK-3 kinase, nuclear accumulation of beta-catenin and activation of wnt target genes. A second signaling pathway involving PKC and calcium fluxes has been seen for some family members, but it is not yet clear if it represents a distinct pathway or if it can be integrated in the canonical pathway, as PKC seems to be required for Wnt-mediated inactivation of GSK-3 kinase. Both pathways seem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOMAIN

"A region rich in aspartic acid, arginine, tyrosine, and glycine (DRYG) mediates eukaryotic initiation factor 4B (eIF4B) self-association and interaction with eIF3.";

Mol. Cell. Biol. 16:5328-5334(1996).

"HOLICON: REQUIRED FOR THE BINDING OF MRNA TO RIBOSOMES. FUNCTIONS IN CLOSE ASSOCIATION WITH EIF4-F AND EIF4-A. BINDS NEAR THE 5'-TERMINAL CAP OF MRNA IN PRESENCE OF EIF4-FAND ATP. PROMOTES THE ATPASE ACTIVITY AND THE ATP-DEPENDENT RNA UNWINDING ACTIVITY OF BOTH EIF4-A AND EIF4-F.

SUBJUNT: SELF-ASSOCIATES AND INTERACTS WITH EIF3 pl70 SUBJUNTT.

--- SIMILARITY: CONTAINS 1 RNA RECOGNITION MOTIF (RRM).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE-94187701; PubMed-8139536;
Methot N., Pause A., Hershey J.W., Sonenberg N.;
"The translation initiation factor eIF-4B contains an RNA-binding region that is distinct and independent from its ribonucleoprotein consensus sequence.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence

                                                                                                                                                                                   SPI, SUGGESTING A MOLECULAR INTERDEPENDENCE. REQUIRED FOR THE
DEVELOPMENT OF INTERVEINS CELLS.

-!- SUBCELLULAR LOCATION: Secreted.
-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2; ARE
PRODUCED BY ALTERNATIVE SPLICING.
-!- DEVELOPMENTAL STRIPES THAT ARE BROUGHT TO THE MIDLINE AS
CASTRULATION PROCEEDS. IN THE GERM-BAND RETRACTION STAGE,
EXPRESSION IS SEEN IN THE GERM-BAND RETRACTION STAGE,
EXPRESSION IS SEEN IN THE AND EPIDERMIS. AT LATE BLASTODERM,
EXPRESSION IS SEEN IN THE AND EPIDERMIS. AT LATE BLASTODERM,
EXPRESSION IS SEEN IN THE AND EPIDERMIS. AT LATE BLASTODERM,
EXPRESSION IS SEEN IN THE AND EPIDERMIS. AT LATE BLASTODER,
EXPRESSION IS SEEN IN THE AND EPIDERMIS. AT LATE BLASTODER,
EXPRESSION IS DECAYS IN ALL ECTODERMAL COBES,
AND AROUND THE STOMODEUM THROUGHOUT EMBRYO DEVELOPMENT. IN LATE
EMBRYOS, EXPRESSION DECAYS IN ALL ECTODERMAL CELLS AND APPEARS IN
THE SEGMENTAL MUSCLES AND THE GUT WALL. IN THE LARVA, EXPRESSION
OCCURS IN THE DORSAL METATHORACIC DISC, THE EYE-ANTENNAL DISC AND
THE VENTRAL THORACIS DISC. FOUND IN THE INTERVEIN IN THE PUPA.
-!- SIMILARITY: CONTAINS 1 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE-Imaginal disks, and Embryo;

Biotechnol. Blochem. 60:717-720(1996).

- CATALYTIC ACTIVITY: Hydrolysis of alpha-(1-×4)-D-glucosidic linkage in 4-alpha-D-{(1-×4)-alpha-D-glucanosyl}(n) trehalose yield trehalose and alpha-(1-×4)-D-glucan.

- PATHWAY: Trehalose biosynthesis.
- SIMILARITY: BECONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               use by non-profit institutions as long as its content is in no way modified and this statement is not removed. It seems to assemble into a dynamic ring on the inner surface of the cytoplasmic membrane at the place where division will occur, and the formation of the ring is the signal for septation to begin. Binds to and hydrolyzes GTP (By similarity). SUBUNIT: Aggregates to form a ring-like structure (By similarity). SUBCELLULAR LOCATION: Cytoplasmic. Assembles at the inner surface of the cytoplasmic membrane (By similarity).

SIMILARITY: BELONGS TO THE FTSZ FAMILY.

"Caenorhabditis elegans nuclear receptor sequences exhibit biophysical compatibility with the ligand-binding domain fold.";
Submitted (MAY-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: ORPHAN NUCLEAR RECEPTOR.
-!- SUBCELLULAR LOCATION: Nuclear (Potential).
-!- SIMILARITY: BELONGS TO THE NUCLEAR HORMONE RECEPTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Q09587; Q9GTI4; Q9GTI5;

SUBCELLULAR LOCATION: NUCLEAR:
TISSUE SPECIFICITY: NEUROBLASTS AND SENSORY ELEMENTS.
DEVELOPMENTAL STAGE: EXPRESSED PRIMARILY DURING THE FIRST HALE EMBRYOGENESIS. INITIAL EXPRESSED PRIMARILY DURING THE MASTODERM STAGETHEN IN ECTODERMAL STRIPES DURING GERMBAND EXTENSION. BROAD EXPRESSION IN THE NEUROPECTODERM FOLLOWED BY LIMITATION TO DISSUBSETS OF CMS CELLS, AND EXPRESSION IN SPECIFIC PMS NEURONS SUPPORT CELLS.

SUPPORT CELLS. BELONGS TO THE POU TRANSCRIPTION FACTOR FAMILY.
